Week 0: Orientation, Onboarding & Python Readiness

CariSurg Healthcare AI Program

Career Challenge

Topic: Time Management for MedTech Students

Deliverable: Personal timetable submitted on Day 7

During the last two weeks, I reviewed how my time was spent each day. Most of my time went toward sleep, household tasks, commuting, and personal errands, while approximately 10–12 hours per week were spent studying. After completing this audit, I recognized the need for a more structured routine to better balance academic and personal responsibilities during the MedTech programme. For Weeks 1–12, I created a realistic weekly schedule that protects at least 20 hours per week for studying by setting aside 3–5 hours daily for coursework, revision, assignments, and independent reading. My main study periods are scheduled from 6:00 p.m. to 9:00 p.m. on weekdays, with additional study sessions on weekends. I applied the Eisenhower Matrix, which was presented in a time-management class slide, to separate urgent and important tasks from less important activities. Coursework, assessments, and clinical preparation were placed in the urgent and important category, while entertainment and social media were scheduled only during free time. This schedule works well for me because it is realistic, organized, and flexible enough to balance study, rest, and personal responsibilities while helping me remain productive and prepared throughout the programme.
